CMC Review of Public Nuisance
Attention: [Redacted]

FORMAL SUBMISSION

Drear sir,
Some of the biggest emerging nusiances in our society today that need urgent action are as follows;

1 VEICHLES WITH BIG-BASE STEREO SYETEMS

The sales of these systems (mostly to young drivers) has an affect on families and the elderly where by the sound (base at it's acoustic level) actually travels through the walls of peoples homes and creates a disturbance in our suburbs and in public space.

This sound particularly at night time when people deserve to enjoy the quiet at the end of the day is considered by many as a serious breach of our right to our peaceful pleasure.

2 MODIFIED & OVERPOWERED VEICHLES THAT CREATE EXCESS NOISE

Recent changes to the law allowing police to confiscate cars of offenders doing burn-outs and other unlawful acts on our roads & in our suburbs seem to have only had a minor affect as a deterant.

This is still a real problem that creates a nusiance in neighbourhoods and public spaces where by many of the offenders are very young and inexperienced and it is largely considered dangerous for such young drivers to be in charge of strapping big V8 cars.

The sound of screaching wheels & loud reving motors is nothing new, it's just become a popular trend again amongst the young drivers and residents & the public are constantly bombarded with this noise day & night and this is considered a nusiance by many families and the elderly.

we are all entitled to a peaceful life without being forced to endure the bad social habbits of a generation that apparantly seems to have little consideration for anyone else.

New laws & regulations need to be formed to deal with the "noise nusiance" I have listed above.
